

Available for use with the Aruba 4 (AWR) and Freeport 2 (FWZ) boiler.

Designed to simplify the installation, operation and service of the entire boiler system and save energy. Plug in OC Cards control different boiler functions and snap right into the OC Panel.

Available OC Cards

- **Outdoor Air Reset** - The Outdoor Air Reset Kit regulates the boiler's heat delivery rate to match the home's heat demand and heat loss by adjusting the supply water based on the air temperature outside.
- **High Limit Aquastat** - The High Limit Aquastat Kit is a manual reset, UL limit rated control that will shut the boiler down when the temperature goes above a set level.
- **Low Water Cutoff** - The Low Water Cutoff Kit is available in both automatic and manual reset options. It detects the absence of water in the heating system and will shut down the boiler when the water drops to unsafe levels, preventing damage to the system.
