

SERIES 24

Commercial, Forced Draft, Hot Water or Steam Boiler

Sizes from 342 to 1,842 MBH output

The right fit for any commercial job

- The Series 24 is built to handle any installation - businesses, institutions, apartments, and other commercial buildings
- Available for use with gas, oil, or combination gas/oil fired in hot water and steam models
- Delivered in easily handled sections for convenience on the job site

Series 24 Features

- Cast iron sectional heat exchanger and push nipples
- Vertical flue design
- Easily assembled with short individual draw rods
- Optional tankless heater for domestic hot water
- Top or rear vent connections
- Side cleanout plates
- Optional Return Temperature Control (RTC)
- Ten sizes ranging from 342 to 1,852 MBH output

See back side for specifications

CROWN **SERIES 24** Commercial Hot Water or Steam Boiler

Ten reasons why you need the Series 24 commercial boiler

1. Optimum for large installations –

Available in ten sizes from 342,000 to 1,852,000 BTU/hr output.

2. Gas, oil or combination gas/oil fired –

Customer's preference in the choice of fuels for economy and availability may be an important part of the purchase decision.

3. Hot water or steam –

The Series 24 has been designed to meet a wide variety of installations.

4. Tankless heater available for domestic hot water –

Convenient for small spaces or difficult installations that preclude a separate water heater. Finned copper coil heats water fast, and piping is easier to install.

5. Cast iron construction –

Cast iron heat exchanger sections and push nipples provide long life. Cast iron resists the effect of petroleum-based chemicals such as corrosion inhibitors, pump lubricants and antifreeze. Cast iron push nipples are important because they expand and contract at the same rate as the sections they join, which provides integrity to the entire assembly.

6. Convenient delivery in sections –

Delivery is available in easily handled sections that can be maneuvered through doorways and down stairs

making this boiler ideal for installs where the boiler room is not readily accessible.

7. Easy assembly –

Once in place, the sections are easily assembled using a 3/4-inch drive ratchet with a 1-1/16-inch-deep socket and a wrench. Short draw rods pass through the sections' reinforced lugs, resulting in fast, strain-free assembly.

8. Versatile venting options –

The Series 24 is a forced draft boiler that eliminates the need for high chimneys or draft inducers. Uniquely, the boiler can be vented from either the top or rear for maximum installation flexibility. Rear outlet venting requires only 6-1/2 feet of vertical clearance from floor to ceiling.

9. Hassle-free maintenance –

All regular maintenance access areas are located on the left side, allowing the Series 24 to be installed 9 inches from the right sidewall. Removable jacket panels and flue cover plates simplify access to the heating surfaces.

10. It's a CROWN!

Satisfied customers are our goal. So, all CROWN boilers employ the latest technology for performance and safety. We offer a wide range of products to meet each customer's individual needs, and we offer competitive pricing, attractive warranties and optional extended coverage.

Standard Equipment

All Boilers – Sections unassembled, flush insulated jacket, burner mounting plate, burner adapter plate, rear flue damper (top outlet optional), flue canopy, rear observation port cover, target wall (S24-03), and miscellaneous plugs, bushings and fittings.

Steam Trim – 15 PSI safety valve, L404A pressuretrol, gauge glass assembly, steam gauge.

Water Trim – 30 PSI safety relief valve, L4006A high limit, pressure temperature gauge.

Oil Boilers – Flange mounted flame retention oil burner furnished with 2 stage fuel unit, primary control and dual oil valves.

Gas Boilers – Flange mounted gas burner with standard controls meeting the latest UL requirements, dual gas valves and electronic ignition.

Optional Equipment

Top outlet flue damper, tankless heaters, 50 PSI relief valves (water), and combustion and hydronic controls to meet ASME CSD-1.

CROWN SERIES 24 Commercial Hot Water or Steam Boiler

Notes:

- Trim suffix S = Steam Boiler W = Water Boiler
Fuel suffix N = Natural Gas O = Oil
- I=B=R net ratings shown are based on piping and pick-up allowances which vary from 1.333 to 1.289 for steam and 1.15 for water. Consult manufacturer for installations having unusual piping and pick-up requirements, such as intermittent system operation, extensive piping systems, etc. The I=B=R burner capacity in GPH is based on oil having a heat value of 140,000 BTU per gallon.
- Firebox volume does not include added volume of 8" extended burner mounting plate (BMP). If 8" BMP is specified (refer to Figure 1), add 0.7 cu. ft. to volume listed above.
- Boiler ratings are based on 12.5% CO2 (oil) and 9.7% CO2 (natural gas), + .10" (inches) water column pressure at boiler flue outlet. Ratings shown above apply at altitudes up to 1000 feet on oil and 2,000 feet on gas. For altitudes above those indicated, the ratings should be reduced at the rate of 4% for each 1000 feet above sea level.

Maximum Allowable Working Pressure: Steam Boiler – 15 PSI, Water Boiler – 80 PSI (US) - 45 PSI (Canada)
Standard Safety (Relief) Valve Set Pressure: Steam Boiler – 15 PSI, Water Boiler – 30 PSI

Beckett Gas Burners (Natural Gas)

Boiler Model	Burner Model	Rate Control	STD. Motor Voltage	H.P.	Min. Inlet Pressure (in W.C.)	Gas Train Size

Note:

1. A burner adapter plate is needed for each boiler.

Series 24 Minimum Piping Recommendations – Water Boiler

Impact of System Piping – Many hot water systems are zoned. Some also use mixing valves to control the water temperature in the system. These features can cause the flow through the boiler to vary dramatically, depending on the status of the zones or mixing valves. In addition, the large water content of many commercial systems has the potential to subject the boiler to operation with low return temperatures for an extended period of time. These factors can shorten the life of a boiler due to thermal shock or flue gas condensation.

Crown's 3 Recommendations – On the following pages, CROWN provides three basic recommendations for near-boiler piping that are intended to maximize the life expectancy of the boiler by protecting it from flue gas condensation and thermal shock. Each protects the boiler by making sure that both of the following conditions are met:

- The flow *through the boiler* is high enough to ensure a temperature rise of less than 40°F

Control Tappings

TAPPING LOCATION	SIZE (IN.)	STEAM BOILER	WATER BOILER
A	4	Supply	Supply
B	4	Plug (24-03 thru 24-06) Supply (24-07 thru 24-12)	Plug
C	3	Blow-Off Valve	Return
D	3	Return	Plug (24-03 thru 24-11) Return (24-12)
E	3	Plug	Blow-Off / Drain Valve
F	3	Plug	Plug
G	1-1/2	Safety Valve / Surface Skim Tap	Relief Valve
J1	1	Plug	Plug
J2	1	Float L.W.C.O.	Plug
K	3/4	Plug	Probe L.W.C.O.
M	3/4	Operating Pressure Limit Control	Operating Temperature Limit Control
N	3/4	Hi Pressure Limit Control / Manual Reset	Hi Temperature Limit Control/Manual Reset
P	1/2	Gauge Glass/#67 L.W.C.O.	Plug
Q	1/2	Steam Gauge (Bush to 1/4")	Temperature/Pressure Gauge (Bush to 1/4")
S	3/4	Tankless Heater Control	Tankless Heater Control
T	3/4	Firing Rate Pressure Control	Firing Rate Temperature Control

- The return temperature does not fall below 135°F for an extended period of time.

RTC Return Temperature Control – Piping Recommendation 3 makes use of CROWN's optional RTC (Return Temperature Control). This control provides an economical and effective way of protecting the boiler from thermal shock and condensation. It can be incorporated into most hot water systems with minimal modifications to the system design and operation. When this option is used on multiple Series 24s, one RTC is required for each boiler. The CROWN RTC is also available with an outdoor reset option. This provides additional energy savings by modulating system water temperature to match the building load requirements.

Series 24 Minimum Piping Recommendations – Water Boiler

Recommendation 1 is used when the load is constant and not varied due to mixing or multiple zones. Use when:

- system return water is *not less* than 135° F for prolonged periods of time
- system flow *does not impact* flow through the boiler

Recommendation 2 is a primary-secondary piping method that maintains a constant flow through the boiler by using a secondary boiler circulator. This arrangement isolates the boiler from flow variations but does not safe-guard against cold return water temperatures. Use when:

- system return water is *not less* than 135° F for prolonged periods of time
- system flow *does not impact* flow through the boiler (i.e. zoning, mixing)

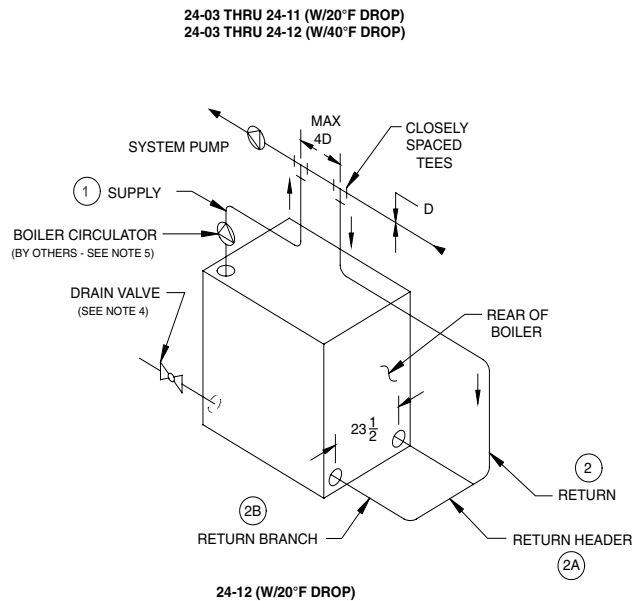

PIPE SIZING AND NOTES FOR RECOMMENDATIONS 1 AND 2

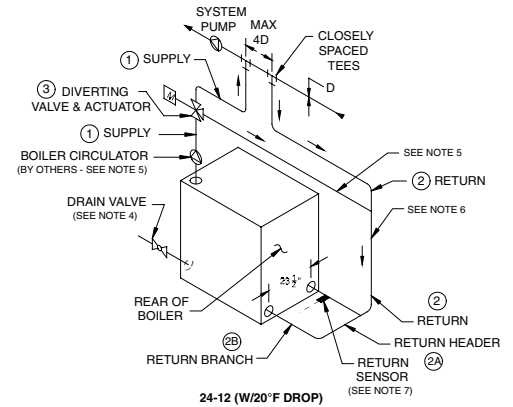

BOILER MODEL	SUPPLY PIPING SIZE (IN) (1)		RETURN PIPING SIZE (IN)			
			RETURN (2)		RETURN HEADER (2A)	RETURN BRANCH (QTY.) SIZE (2B)
	20°F DROP	40°F DROP	20°F DROP	40°F DROP	20°F DROP	20°F DROP
24-03	2	1-1/2	2	1-1/2	-	-
24-04	2	1-1/2	2	1-1/2	-	-
24-05	2	1-1/2	2	1-1/2	-	-
24-06	2-1/2	1-1/2	2-1/2	1-1/2	-	-
24-07	2-1/2	2	2-1/2	2	-	-
24-08	2-1/2	2	2-1/2	2	-	-
24-09	3	2	3	2	-	-
24-10	3	2-1/2	3	2-1/2	-	-
24-11	3	2-1/2	3	2-1/2	-	-
24-12	4	2-1/2	4	2-1/2	3	(2) 3

Notes:

- All piping is schedule 40.
- Pipe sizes listed are based on a 20° F or 40° F differential (temperature drop).
Select one to match application.
- When specified return piping is less than 3", install 3" x 12" nipple and appropriate size bell reducer directly into boiler return tapping as shown.
- Drain valve—ball valve preferable, gate valve acceptable alternative (supplied by others).—Minimum valve size per ASME code is 3/4" NPT.

Recommendation 3 is used when the return water temperature goes below 135°F for prolonged periods of time. This is also primary-secondary piping, but includes the addition of a 3-way valve, return water sensor and boiler-mounted RTC Return Temperature Control.

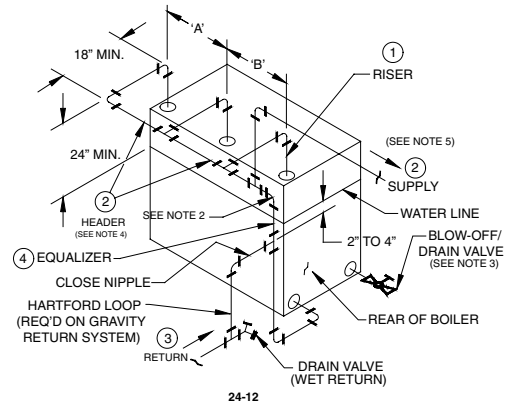

PIPE SIZING AND NOTES FOR RECOMMENDATION 3

BOILER MODEL	SUPPLY PIPING SIZE (IN) (1)		RETURN PIPING SIZE (IN)			
	20°F DROP	40°F DROP	RETURN (2)		RETURN HEADER (2A)	RETURN BRANCH (QTY.) SIZE (2B)
			20°F DROP	40°F DROP	20°F DROP	20°F DROP
24-03	2	1-1/2	2	1-1/2	-	-
24-04	2	1-1/2	2	1-1/2	-	-
24-05	2	1-1/2	2	1-1/2	-	-

24-11	3	2-1/2	3	2-1/2	-	-
24-12	4	2-1/2	4	2-1/2	3	(2) 3

Notes:

- All piping is schedule 40.
- Pipe sizes listed are based on a 20° F or 40°F differential (temperature drop). Select one to match application.
- When specified return piping is less than 3", install 3" x 12" nipple and appropriate size bell reducer directly into boiler return tapping as shown.
- Drain valve—ball valve preferable, gate valve acceptable alternative (supplied by others).—Minimum valve size per ASME code is 3/4" NPT.
- Maximum linear feet of pipe from 3-way bypass port to sensor location = 11 feet. Bypass line shall be the same diameter as return A.
- Minimum linear feet of pipe from point of mixing (where bypass meets return line) to sensor location = 4 feet.
- Install special 3" x 12" nipple with 1/4" NPT side tapping closest to boiler. Where applicable, use bell reducer to adapt to recommended return pipe size.
- Proper boiler circulator sizing is listed in RTC literature.

Series 24 Minimum Piping Recommendations – Steam Boiler

BOILER MODEL	PIPING SIZE (IN)				RISER SPACING (IN)	
	RISER (QTY.) SIZE (1)	HEADER & SUPPLY (2)	RETURN (3)	EQUALIZER (4)	'A'	'B'
24-03	(1) 3"	3"	1-1/2"	2"	-	-
24-04	(1) 4"	4"	2"	2"	-	-
24-05	(1) 4"	4"	2"	2"	-	-
24-06	(1) 4"	4"	2-1/2"	2-1/2"	-	-
24-07	(2) 4"	6"	2-1/2"	2-1/2"	36"	-
24-08	(2) 4"	6"	2-1/2"	2-1/2"	42"	-
24-09	(2) 4"	6"	2-1/2"	2-1/2"	48"	-
24-10	(2) 4"	6"	3"	3"	54"	-
24-11	(2) 4"	6"	3"	3"	60"	-
24-12	(3) 4"	6"	3"	3"	30"	-

Notes:

- All piping is schedule 40.
- To prevent condensate from being trapped in header, do not reduce equalizer elbow at header connection.
- Drain/blowoff valve—ball valve preferable, gate valve acceptable alternative (supplied by others).
 - Minimum valve size per ASME code is 3/4" NPT 24-03/24-05; 1" NPT 24-06/24-10; 1-1/4" NPT 24-11/24-12.
 - Increasing the valve size will improve the blowdown operation
 - In all cases, piping connection blowoff valve to boiler should be full size to the point of discharge.
- For pumped return systems, see Series 24 installation manual.
